

GANG LEADER CABS

Digital Auto-Rickshaw Platform — Bengaluru, Karnataka

SYSTEM REQUIREMENT SPECIFICATION (SRS) & FINAL SCOPE FREEZE DOCUMENT

v1.0 — Scope Frozen | June 2026 | CONFIDENTIAL

Prepared For:	Ominfowave Software Development Team
Author / Owner:	GANG LEADER CABS Management
Operation City:	Bengaluru, Karnataka
Document Date:	June 2026
Version:	v1.0 — Scope Frozen

15
SECTIONS

0. BRAND SPLASH SCREEN ANIMATION

When any user, parent, or driver opens the application or scans the vehicle web page, the screen must instantly initiate with a high-definition, interactive Map of India.

Animation Sequence:

- From the absolute center of the India Map, GANG LEADER CABS must dynamically emerge via an elegant, premium cinematic zoom and fade animation.
- Within exactly 2 seconds, the full text must smoothly morph, condense, and lock into the official three-letter brand acronym: GLC, transitioning onto the primary login screen.

1. VINTAGE DIGITAL METER USER INTERFACE (UI) LOGIC

1.1 Retro Aesthetics Layout

To establish a unique brand identity ("Old is Gold"), the live digital meter on the Customer Responsive Web Page and Driver App must visually mimic a classic vintage analog-mechanical auto-rickshaw fare meter (Super Meter MFG design inspired).

1.2 Mechanical Rolling Animation

The numerical displays for Fare (Rupees and Paise) and Distance (Kilometers and Meters) must NOT flatly change font digits. Numbers must physically slide and roll up/down dynamically via a custom Dynamic Number Tumbler effect in real-time as the vehicle travels.

2. PARENT PORTAL, SUBSCRIPTION & STUDENTS ATTENDANCE

2.1 Attendance Notifications — WhatsApp / SMS at 4 Checkpoints:

- Student successfully boards the vehicle in the morning.
- Vehicle reaches the school premises.
- Student boards for the return evening trip.
- Student safely reaches home.

2.2 Parent Portal Security

The unique QR-generated web link allows parents to log in securely (no app download) to:

- View real-time vehicle GPS live coordinates.
- Review comprehensive daily and monthly attendance histories.
- Monitor subscription wallet status and view automated digital invoices.

3. REGULAR PASSENGER RIDE FLOW (MULTI-MODE MECHANISM)

Mode A — Direct Online Scan

Customer scans GLC vehicle QR placard via Smartphone Camera / Google Lens / UPI App. Web URL renders instantly. Driver taps 'Start Ride' → GPS tracks from zero → Trip Ends → Final fare calculates → Customer pays via web payment or driver's UPI.

Mode B — Direct / Offline Manual Ride

Offline-capable 'Direct Ride' interface in Driver App. Driver manually initiates and terminates the trip. Platform calculates exact fare using local device hardware GPS.

Mode C — Long-Distance Remote QR / Village Hail Logic

Remote Scan:

Customer scans a saved digital image of that driver's GLC QR from their phone gallery.

Auto GPS Capture:

System automatically captures customer's precise real-time hardware GPS coordinates without requiring manual address typing.

Deadhead / Dead-Mile Protection:

Vintage meter starts ticking the exact moment driver accepts booking and moves — protecting driver from dead-mile fuel losses.

Direct Village Contact Transparency (NEW):

Mode C ONLY — bypasses masked cloud-calling. Real Name + Phone Number of both Customer and Driver instantly display on each other's interfaces upon booking acceptance.

4. SMART SINGLE VEHICLE QR ARCHITECTURE

One multi-purpose QR Code per vehicle. Backend intelligently differentiates between a regular passenger ride scan and a school student verification session based on routing variables, user login states, or active time-window algorithms.

5. EXTENSIVE DRIVER ONBOARDING & ACCOUNT FREEDOM

5.1 App Store Discovery

Deployed as "GLC - Gang Leader Cabs" on Google Play Store & Apple App Store. Typing "GLC" must pull the app as the topmost result.

5.2 Simplified Passwordless Onboarding via OTP

- Driver Profile Photo (Live Selfie)
- Vehicle / Auto Number Plate Details
- Vehicle / Auto Physical Photo
- RC Book Photo
- Driving License (DL) Photo
- Aadhaar Card Photo
- PAN Card Photo
- Bank Account Details (Account No., Holder Name, IFSC, Passbook Photo)

5.5 Self-Service Profile Modifications

All driver-initiated changes route to Admin as a 'Pending Authorization Ticket.' Once verified and approved, the live database and printable QR update instantly.

6. DRIVER SUBSCRIPTION AND PER-RIDE COMMISSION RULES

#	Rule	Details
6.1	Negative Wallet Threshold	Drivers can operate down to -Rs.50. Once breached, account locks from all customer transactions.
6.2	Fixed Monthly SaaS Fee	Flat fee of Rs.30 per month paid to company via driver wallet.
6.3	Flat Per-Trip Commission	Exactly Rs.1 per ride auto-deducted from driver's pre-funded wallet.
6.4	Global Admin Variables	Both Rs.30 subscription fee and Rs.1 trip commission are adjustable via Master Admin Panel at any time.

7. PREPAID STUDENT LIFECYCLE & BACKUP BROADCAST MECHANISMS

7.1 Prepaid Mandatory Subscription

Parents top up for fixed cycles: 7 Days, 10 Days, or 30 Days. Route scheduling freezes immediately if balance hits zero.

7.2 Instant Automated Driver Settlement

On 'Trip Completed' swipe: Rs.40/day per student (Rs.20 Morning + Rs.20 Evening) instantly debited from parent's prepaid balance and deposited to Driver's wallet, minus Rs.1 platform fee.

7.3 Advanced Leave Carry-Forward Rule

Parents log leave up to 2 days in advance. Rs.40/day fee is protected and carried forward as credit balance. Student auto-removed from driver's active pickup grid for those dates.

7.4 Emergency Backup Broadcast Protocol

Emergency absence triggers broadcast to nearest 10-Driver radius grid. First driver to Accept claims full route payout. Parents instantly receive replacement driver details.

8. ADVANCED FARE CONFIGURATION & MULTI-ZONE ENGINE

8.1 Geographic Multi-Zone Baseline Matrices

Admin defines distinct operational zones (e.g., Whitefield, Koramangala, Rajajinagar) with individual per-kilometer baseline rates via polygon geofencing tools.

8.2 Dynamic Calendar-Based Pricing

Day Type	Min Base Fare	Tariff
Standard Weekdays (Mon–Fri)	Rs. 40	Default Per-KM Tariff
Weekends & Public Holidays	Rs. 49	Custom Weekend Tariff (e.g. Rs.20/KM)

Note: Admin can pre-select custom festival dates via calendar grid to auto-trigger premium rates.

8.3 Night Multiplier Integration

From 10:00 PM to 05:00 AM — dynamically applies 1.5x Fare Multiplier on base meter matrix. Timing window and multiplier percentage fully adjustable via Master Admin Panel.

9. REAL-TIME INCREMENTAL METER TRANSPARENCY LAW

9.1 Absolute Zero Baseline Launch

All transactions initiate from absolute zero (0.0 KM / Rs.0 or Base Minimum Fare). Upfront fixed/blind pricing packages are strictly REJECTED.

9.2 Progressive 100-Meter Financial Ticking

Financial values compute live for every 100 meters. Example: Rs.20/KM = meter rolls +Rs.2 per 100m.

9.3 Mid-Trip Termination Protection

Early drop-off: meter auto-calculates Minimum base Rs.40 + actual distance = final total.

9.4 Driver Shortcut & Expertise Protection

Fewer KM than estimated = original upfront fare stays LOCKED as driver incentive. Official traffic rerouting extends route = extra distance appended at +Rs.2 per 100m.

10. TRANSACTION SEGREGATION & PRINTABLE DRIVER QR SYSTEM

10.1 Central Corporate Funds Routing

All school subscription payments pass through Razorpay → directly into GLC's centralized corporate bank account.

10.2 Direct Peer-to-Peer Passenger Settlements

Regular passenger payments BYPASS company accounts. Driver's verified personal UPI ID embeds directly in the scanned customer web UI. Passengers pay 100% directly via peer-to-peer UPI. Platform captures Rs.1 cut separately from driver's pre-funded wallet.

10.3 In-App Printable Smart QR Engine

Drivers download high-resolution QR via 'My QR' tab. QR dynamically overlays Driver's Name and Active Vehicle Number. Drivers print and laminate independently for vehicle mounting.

11. SCHOOL SECURITY GATEWAY, PROTOCOLS & SMART CLOUD CALLING

11.1 Alphanumeric Route Identifiers

Every school route gets a rigid identifier (e.g., ROUTE A) displayed in large fonts on the active driver's screen and as a physical dashboard placard to prevent wrong boarding.

11.2 Weekly Student Photo Verification Sync

Parents upload a fresh child photo weekly. During pickups, Driver App displays Photos and Names of 5 assigned students mapped to that Route ID. Drivers must visually match every child.

11.3 Masked Contact Data Privacy

Drivers are strictly BLOCKED from seeing parents' phone numbers. Emergency at gate → driver taps 'Call Support'.

11.4 Cloud Parallel Conference Telephony

System triggers instant call to Customer Care. Simultaneously places a parallel outbound call to the masked parent record — enabling immediate, recorded conference resolution. All state-wise support routing numbers editable via Master Admin Dashboard.

12. MINIMAL MOBILE INTERNET DATA & STORAGE OPTIMIZATION

12.1 Lightweight Compiled Driver APK

Production-ready Driver Android App: compressed storage footprint strictly UNDER 15 MB.

12.2 Zero-Download Customer Web Performance

Lightweight mobile-responsive web portal with rendering time under 1 second. No phone storage consumed.

12.3 Smart GPS Payload Compression

Location coordinates compressed before server transmission. Native Local Map Data Caching prevents constant downloading of repetitive map assets.

13. USER ACCESSIBILITY & STATE-WISE LANGUAGE AUTONOMY

13.1 Complete Language Freedom Matrix

Language Toggle available in Driver App, Parent Portal, and Customer Web UI: Tamil, Kannada, Malayalam, Telugu, Hindi, and English. NOT locked to state geofences.

13.2 Driver Autonomy Case

A Tamil-speaking driver in Bangalore must be completely free to select a Tamil interface. All UI components, fields, and system notifications translate dynamically per user preference.

14. IN-RIDE MICRO-ADVERTISEMENT ENGINE & VIDEO TUTORIALS

14.1 Compact Non-Intrusive Layout

Ads strictly contained within a small micro-banner at the base or corner of the web UI. Must NOT obstruct or overlay the primary digital meter screen.

14.2 Localized Hyperlocal Ad Ingestion

Admin uploads text, image banners, or short video slots from local Businesses, Restaurants, Hotels, and Residential Real Estate. System alternates ads with news tickers and inspirational quotes. All ad revenues route 100% to the central company corporate account.

14.3 Native Video Tutorial Engine

Driver App, Parent Portal, and Admin dashboards host a native 'Help & Video Tutorials' repository. Master admin uploads short guide videos for independent user troubleshooting.

15. ADMINISTRATIVE ALERTS, CORE PROTECTION & SYSTEM ROADMAP

15.1 Two-Way Feedback Grid

Following ride closure, both operators and customers can rate the transaction from 1 to 5 Stars.

15.2 Red Alert Notification Dispatch

Any 1-star or 2-star feedback, or specific dispute keywords, triggers an immediate high-priority Red Alert flag on the Admin Panel for live customer service mediation.

15.3 Financial Access Security Gate

Branch Managers and Supervisors have ZERO database permissions to modify corporate bank settings, redirect funds, or manage wallet balances. Read-only analytical and operational access only.

15.4 White-Label Scalability Blueprint

Option A permanently locked. Core database infrastructure, API microservices, and structural layers must be white-labeled and horizontally scalable to integrate Cabs, Logistics, and Home Services in subsequent versions WITHOUT architecture rewrites.

GANG LEADER CABS (GLC) — Scope Freeze Confirmed | June 2026 | Prepared for Ominfowave Software Development Team | CONFIDENTIAL
